

Ideation Phase

Brainstorm & Idea Prioritization

Date	29 September 2026
Team ID	SWTID-2026-3488
Project Name	Import Data using Transform Maps (Spreadsheet)

Brainstorm & Idea Prioritization :

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem statement: Manually entering employee records from spreadsheets into ServiceNow is slow, error-prone and creates duplicate records. The team needs an automated, repeatable way to import spreadsheet data into a ServiceNow table using Import Sets and Transform Maps.

S.No.	Team Member	Role in the Project	Responsibility
1	Prabha.C.G	Team lead, Testing & Validation	Overall coordination, final documentation. Run transform, verify records, capture screenshots.
2	Keerthana.S	Data preparation	Prepare and validate the spreadsheet (Employee ID, Name, Email, Department, Location)
3	Bhuvaneshwari.R	ServiceNow Configuration	Create target table, Import Set and Transform Map

Step-2: Brainstorm, Idea Listing and Grouping

Each member writes down as many ideas as possible (volume over value). Ideas are then grouped by theme.

Team Member	Ideas
Keerthana.S	Use one clean spreadsheet template with fixed column headers Remove blank rows and duplicate Employee IDs before upload Keep a sample dataset of 10 rows for quick testing
Bhuvaneshwari R	Load file with System Import Sets > Load Data Create the Import Set (staging) table from the file headers Inspect staged rows before transforming

Team Member	Ideas
Prabha C.G	Create a custom target table u_employee Create a Transform Map from the staging table to the target table Use Employee ID as the Coalesce field to avoid duplicates Add a transform script for cleaning (trim spaces, lower-case email) Run the transform and read the Transform History Compare row counts: file vs staging vs target Schedule automated imports in future using a Data Source.

Grouping of ideas:

Group	Ideas in the Group
Data Preparation	Fixed template, remove blanks/duplicates, sample dataset
Import Set Loading	Load Data module, staging table, inspect staged rows
Transform Map Design	Target table, field mapping, Coalesce on Employee ID, transform script
Validation & Automation	Transform History, row-count comparison, scheduled import

Step-3: Idea Prioritization

Ideas are plotted by Importance (vertical) and Feasibility (horizontal). Ideas in the top-right are implemented first.
