

Project Design Phase-II

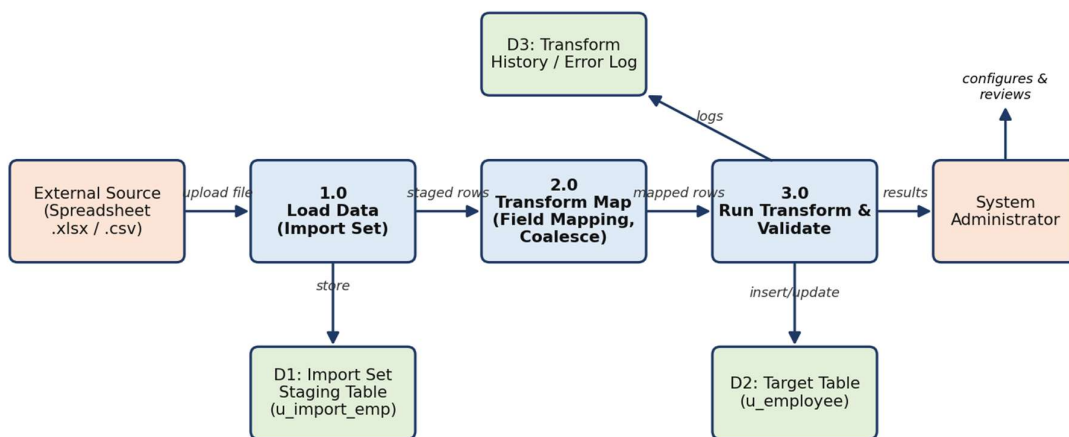

Data Flow Diagram & User Stories

Date	29 September 2026
Team ID	SWTID-2026-3488
Project Name	Import Data using Transform Maps (Spreadsheet)

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Data Flow Diagram - Import Data using Transform Maps (Spreadsheet)

Element	Type	Description
External Source (Spreadsheet)	External entity	Excel / CSV file containing employee data
1.0 Load Data (Import Set)	Process	Uploads the file and creates rows in the Import Set staging table
2.0 Transform Map	Process	Maps source fields to target fields; applies Coalesce
3.0 Run Transform & Validate	Process	Inserts / updates target records; writes the Transform History
D1 Import Set Staging Table	Data store	Temporary copy of the spreadsheet rows
D2 Target Table (u_employee)	Data store	Final, cleaned employee records
D3 Transform History / Error Log	Data store	Counts of inserted, updated, ignored and error rows
System Administrator	External entity	Configures the map, runs the transform and reviews results

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
System Administrator	Data Preparation	USN-1	As an administrator, I can prepare the employee spreadsheet with the required columns	Spreadsheet has Employee ID, Name, Email, Department, Location	High	Sprint-1
		USN-2	As an administrator, I can validate and clean the data (blanks, duplicates, formats)	No blank rows; Employee IDs are unique	High	Sprint-1
	Target Table Setup	USN-3	As an administrator, I can create the custom target table with the required fields	Table u_employee exists with all five fields	High	Sprint-1
		USN-4	As an administrator, I can restrict who can view and import data using roles / ACLs	Only permitted roles can access the table	Medium	Sprint-1
	Import Set Loading	USN-5	As an administrator, I can load the spreadsheet through System Import Sets > Load Data	Import Set table is created and rows are loaded	High	Sprint-1
		USN-6	As an administrator, I can review the staged rows before transforming	Row count in staging equals rows in the file	Medium	Sprint-1
	Transform Map	USN-7	As an administrator, I can create a Transform Map from the Import Set table to the target table	Transform Map is saved with correct source and target tables	High	Sprint-2
		USN-8	As an administrator, I can map each source field to the matching target field	All five fields are mapped	High	Sprint-2
		USN-9	As an administrator, I can set Employee ID as the Coalesce field	Re-running the import does not create duplicates	High	Sprint-2
	Run Transform & Validation	USN-10	As an administrator, I can run the transform	Transform completes and history is generated	High	Sprint-2
Data Owner / Reviewer		USN-11	As a data owner, I can verify the imported records and review any error rows	Target records match the spreadsheet; errors are explained	High	Sprint-2
Project Team	Documentation	USN-12	As a team member, I can capture screenshots and document the process	Documentation and screenshots are complete	Medium	Sprint-2
