

Project Design Phase

Problem – Solution Fit

Date	30 September 2026
Team ID	SWTID-2026-3488
Project Name	Import Data using Transform Maps (Spreadsheet)

Problem – Solution Fit :

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- **Understand the existing situation in order to improve it for your target group.**

ServiceNow – Solution for Import Set Data Integration (Spreadsheet → Transform Map → Target Table)		
1. CUSTOMER SEGMENT(S) (CS) CS  Primary users: • ServiceNow system administrators • Developers / Integration specialists • HR, Finance and other business teams who work with the imported data Data source creators: • Users who prepare and upload the spreadsheets	6. CUSTOMER CONSTRAINTS (CC) CC  • Limited time to prepare and upload files • Spreadsheet data may have duplicates or inconsistent values • Must follow import rules (correct file format, mandatory columns, data type) • PDI / system permissions may restrict access • Need proper mapping for accurate data loading	5. AVAILABLE SOLUTIONS (AS) AS  • Use ServiceNow Import Sets to load data from spreadsheets or CSV files • Configure a Transform Map to map source fields to target table fields • Validate and preview the data before import • Schedule or run the import and monitor logs • Use custom scripts, business rules or data policies for advanced validation (if needed)
2. JOBS-TO-BE-DONE / PROBLEMS (J&P) J&P  • Manually entering large amounts of data is time-consuming and error-prone. • Need a faster and accurate way to import data from spreadsheets. • Existing data has different formats and field names. • Users want a simple and repeatable process without coding.	9. PROBLEM ROOT CAUSE (RC) RC  • Data formats in spreadsheets do not match the target table structure. • Column names and field types are inconsistent. • Duplicate or incorrect data in the source file. • Lack of proper mapping between source and target fields. • No validation or error handling in the import process.	7. BEHAVIOUR (BE) BE  • Admins prefer to clean and verify data before import. • Users follow the standard Import Set process instead of manual entry. • Team members check logs and error messages to fix issues. • Repeated imports are done when data needs updates.
3. TRIGGERS (TR) TR  • New or updated data received in spreadsheet/CSV. • Request from business teams to upload bulk data. • Scheduled data imports (e.g., periodic updates). • Need to migrate data from external sources or systems.	10. YOUR SOLUTION (SL) SL  • Create a new Import Set for the spreadsheet. • Define a Transform Map to match source and target fields. • Map columns, set data types and handle default values. • Validate data, preview records and fix errors. • Run the import, check the import logs and update records in the target table.	8. CHANNELS of BEHAVIOUR (CH) CH  • ServiceNow modules: Import Sets, Transform Maps, Transform History, Import Logs. • Documentation & community forums. • Team meetings / training sessions. • Email or shared drive for files and updates.
4. EMOTIONS: BEFORE / AFTER (EM) EM  Before: • Stressed about data accuracy and format issues. • Uncertain about the correct steps. • Frustrated with manual data entry and errors. After: • Confident and satisfied with the successful import. • Saves time and reduces errors. • Feels capable of handling future imports easily.	11. OFFLINE (OF) OF  • Prepare and clean the spreadsheet (remove duplicates, fix data format). • Validate data and save as CSV/XLSX. • Share the file with the ServiceNow admin/team. • Review mapping plan and target table structure before starting the import.	8.2 OFFLINE: (continued) OF  • Keep a backup of the original file. • Monitor logs and resolve errors. • Confirm data in the target table after import. • Schedule future imports if needed.
